The JHB 10 Hybrid - heavy-duty lift truck with integrated electric-powered trolley

For 50 years, JUNG dealing with products makes transportation machines and systems and safer. JUNG has set itself the task of regularly developing proven products. In the company's anniversary year, a new lift truck concept is presented at the LogiMAT.

The JHB heavy-duty lift truck has proven itself for many years. The stable welded construction and the high load-bearing capacity are particularly noteworthy. These have now been revised and further developed.

The new **JHB 10 Hybrid heavy-duty lift truck** with integrated electric-powered transport trolley is primarily used in assembly line production. It is suitable for transporting machines, regardless of size, up to a maximum tonnage of 10 tons. The machines can be placed extremely flexibly in a process sequence without the need for additional equipment, such as additional rolling platforms, floor rails or lifting aids.

Thanks to the fork construction, the machines can be picked up, moved and set down precisely at the place of use. Due to the high maneuverability of the electric-powered trolley, transport in the tightest spaces are possible. In addition, this enables optimized use of space.

has been that of heavy easier

As with all electric-powered transport trolleys, it is operated with a radio remote control that can be operated intuitively with both hands and with one hand. Of course, there is also the option of using the trolley independently of the lift truck.

Of course, you will also find the tried-and-tested series products from JUNG at the booth. **Hydraulic jacks** and **transport trolleys** in a large variety. The series program from JUNG is supplemented by products in the field of industrial hydraulics, lifting bags, support technology and of course the products of the subsidiary Gorr in the field of **transport equipment** for industry.

You can also find out more about mobile **machine feet, lifting and swivel castors** from FOOT MASTER ® at the booth. The manufacturer will also be present and will also show their range of **castors for FTS**.
