Special issue for EMO in Hanover vom 14<sup>th</sup> - 21<sup>st</sup> of September 2019

## Electric-powered trolley with stroke!

**Heavy Loads - Safe Lifting and Moving - at JUNG you will find the right equipment for it. For more than 45 years, JUNG Hebe- und Transporttechnik GmbH near Stuttgart has been developing, constructing and producing professional heavy-duty transport equipment for loads up to 200 tons using state-of-the-art production methods.**

New from JUNG at EMO: the electric-powered trolley JLA-e 5/12 with stroke! It is a further development of the electric-powered trolley JLA-e 5/12 and has all known characteristics of them. In addition, it now has a stroke-length of up to 50 mm. The stroke is generated by an integrated cylinder placed under the turntable. A hydraulic pump extends the cylinder up to 50 mm so that a load can be lifted and moved. An additional lifting equipment is not required. The trolley is operated by a radio remote control, as with the standard units. The new trolley is optionally suitable for use in production lines, for example, to move rolling platforms without the need for additional lifting equipment.

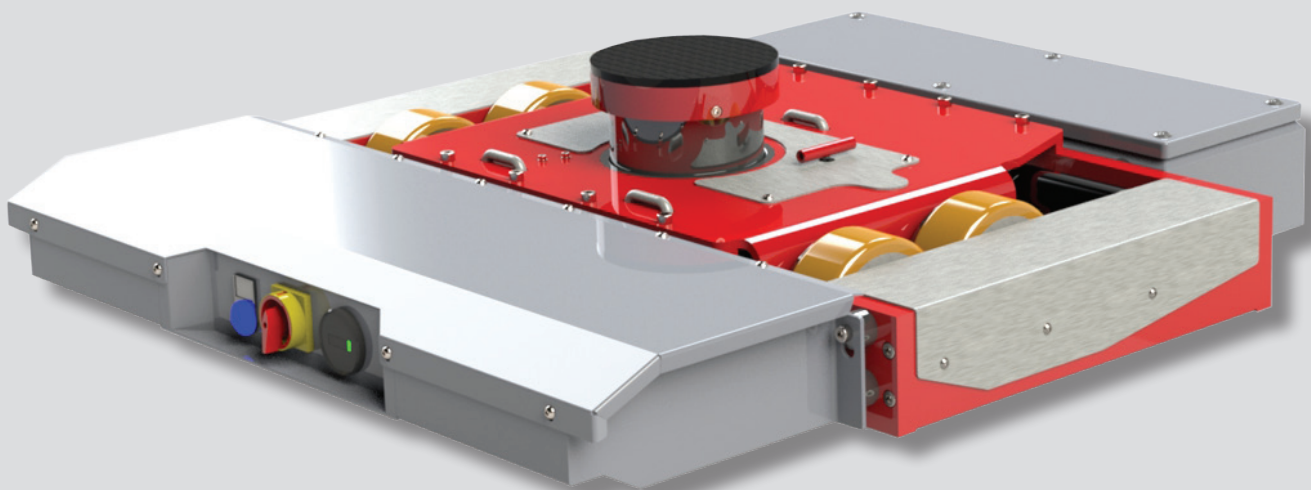

You will also find the proven series products from JUNG at the booth in hall 6. A wide range of hydraulic jacks: from the proven compact model JH G plus with integrated tank to the JH G EX without tank unit for use with an external pump.

JUNG also offers a wide range of transport trolleys: for example the trolleys of the K, G and H series or servo and revolving transport trolleys in different sizes. The JUNG series program will be supplemented by additional products in the fields of industrial hydraulics and leveling castors. These will also be presented at the EMO.

**Visit us at EMO Hanover at the booth of JUNG in hall 6 - booth H17. It is a pleasure for us to welcome you!**
